

## V-Shells for ProMixer Powder Blender

**Description** • Traditional V-Shell requires ingredients to be charged equally through both openings

- Optional stands available to free both hands for charging the V-Shell
- Made from Inox (Stainless Steel 316)
- Mirror-finish (400 grit) and electro-polished for extra-smooth powder flow and easy cleaning
- Shell lids include an agitator blade to improve mixing and help break up lumps
- Shell sizes are based on air volume
- For most powders the recommended volume ensures complete mixing within 5 - 10 minutes
- Using a larger powder volume increases mixing time exponentially
- Using a lower powder volume can result in poor mixing

†Base and Shells sold separately
