

unguator Disposable Mixing Blades

Description • For work with sensitive preparations and suspensions

- Recommended for formulations where it is critical to maintain a closed' environment after the mixing process
- Made from an inert polyimide plastic
- Attach (clockwise) directly to appropriate blade shaft
- Once the preparation is completed, the operator simply disengages (counterclockwise) the disposable blade from the shaft (sold separately), leaving the blade inside the jar
- Provides excellent mixing results with minimal clean-up
- Disposable mixing blades are packed in a conventional unguator jar (with green lid)
- Requires Blade Shafts (not included, see accessories)
