

## Aluminum Ointment Tube with Ophthalmic Tip

**Description** • 5 gram tube with ophthalmic tip†

- Ideal for creams, ointments, and topical medications
- The white metal tubes come with white plastic screw caps
- All tubes have open ends
- Secure the tube after filling by folding the end of the tube by hand or with tongs (available separately, Cat. No. 553-10417); tongs help ensure a tight close and save time when closing multiple times
- Lined with PTFE to help prevent ointments from sticking to the sides and reacting with the aluminum
- Sterilize by gamma irradiation only

†Before dispensing, be sure to remove and discard the tamper-evident ring
