

## Chemically Resistant Absorbent Bench Pads and Wipes

**Description** • Bench pads and absorbent wipes are designed specifically for demanding environments

- Made with a complex proprietary fused 100% polypropylene fibrous matrix, which is a lightweight polyolefin
- Has an incredibly high chemical resistance to most short term exposure of organic solvents as well as acids and alkalis
- Bench pads lay flat with sufficient stiffness to reduce "bunching up"
- Soft enough to be used as a wipe
- Bench pads are 290 g/m<sup>2</sup> basis weight sufficient to easily handle typical lab bench volume spills up to 600 mL safely and quickly
- Wipes absorb 50 mL+ each
- Binding dots on pads accumulate fluids and migrate deeper into the pad allowing fast surface absorption and higher fluid hold saturation
