

## Corning CoolRack M Microcentrifuge Tube Modules

### Description • CoolRack thermo-conductive metal alloy tube modules

- M modules hold 1.5 or 2 mL microcentrifuge tubes
- Eliminates inconsistencies which occur due to inserting tubes directly into ice, dry ice, alcohol baths, water baths and other common temperature sources
- Place the CoolRack module directly onto a temperature source between -196°C to >100°C and it will rapidly adapt to that temperature.
- Ensures +/- 0.1°C temperature uniformity across all tubes when cooling, snap freezing, heating or thawing
- All CoolRack modules may be autoclaved, high heat sterilized or decontaminated with bleach, alcohol or other disinfectants or detergents
