

Argos Transfer Pipets

Description • Argos Technologies Transfer Pipets are manufactured from a custom grade low-density polyethylene (LDPE), making them the perfect substitute for breakable glass pipettes

- These single unit pipets are disposable, therefore eliminating the risk of cross contamination without compromising the quality and precision needed to create controlled, repeatable uniform drops
- The unbreakable nature of these plastic pipets eliminates the risk of injury or infection
- Most of these pipets come packaged in a unique re-sealable dispenser box
- The box is more robustly constructed than most competitive offerings, and the small, easy-to-use, dispenser means our pipets can be conveniently located on any benchtop

- Constructed of translucent shatterproof, low density polyethylene (LDPE) which is non-toxic and inert to biological fluids and most acids
- Available with or without graduations in a variety of sizes and shapes to accommodate multiple uses
- Volumes ranging from 0.25 mL all the way up to 23 mL
- The built-in bulb design eliminates the need to insert or remove cumbersome rubber bulbs
- Temperature range -50 to 90°C
- Can be gas sterilized
- Plastic reduces the loss of cells and proteins that often occurs with binding that takes place with glass alternatives
- Pipets can be heat sealed to provide liquid tight transport, or storage of solutions
- CE Certified
