

Accuris NextPette Variable Volume Pipettes

Description • Ultra-lightweight and ergonomic pipettors

- Durable, accurate, and precise
- The easily accessible volume adjustment system reduces the time and inconvenience associated with volume selection
- The uniquely positioned volume dial is located above the pipette handle, allowing for easy one handed adjustment with the user's thumb
- The volume display is located on the side of the pipettor that faces the use
- Innovative, asymmetrical designed plunger button that can be rotated to match the comfort preference of the user
- This button is freely adjustable to rotate continuously between wide setting, resulting in the more traditional feel of a round, larger diameter plunger button, or to a more narrow (thumb shaped) contour
- NextPette's materials and components were carefully selected to minimize weight and ensure durability and a long service life
- Internal components include precision plungers made of stainless steel (1, 10, 5000, and 10,000 µL models) or ceramic (20, 200, and 1000 uL models) and all use PTFE seals
- Designed with service in mind; easy to disassemble and seals are easy to replace
- Silicone lubricant is included with each pipettor
- Recalibration can be done in the lab - no tools are required and the instruction manual includes full details on how to properly check pipetting accuracy and how to recalibrate if necessary
- Autoclavable at 121°C and resistant to UV exposure
- Factory calibrated in accordance with ISO 8655 standards
- Includes a factory calibration certificate
