

## Ahlstrom Qualitative Filter Papers, Grade 615

**Description** • Ahlstrom Grade 615: 25 m - Fast Speed (non wet-strengthened)

- This fast filtering grade is an intermediate grade between Ahlstrom 617 and Ahlstrom 631
- Ahlstrom 615 has a rough surface and is used for filtering aluminum, ferric and magnesium hydroxides
- It is also found in general construction filtration work and in the filtration of insoluble iron and ore

- Standard Grades (Non Wet-Strengthened)
- Standard qualitative filter papers are suitable for quadrant folded or gravity flow applications
- These grades contain a high level of alpha-cellulose that provides high purity but will weaken when wet
- The inherent strength of standard (untreated) grades does not pose a problem when they are used in routine quadrant folded applications
- Ahlstrom does not recommend these grades for use in vacuum work or when wet handling is required

- Qualitative analysis
- Low ash content 0.06%
- > 95% super refined -cellulose and linter fibers
- Untreated
- Consistent performance
- Custom cut
- Bulk packaging

### Grade 615 Properties:

- Retention: 25.0 µm
- Filtration speed (punch Herzberg): 29 sec./100 mL
- Filtration speed (Rapid): 235 mL/min.
- Loading capacity: High
