

Barnstead Soft-Jacketed Heating Mantles

Description • These mantles feature fiberglass-insulated heating jackets specifically designed for heating round bottom flasks

- They have the size and power capacity to meet any flask heating requirement from 50 to 5000 mL
- A unique heating mantle design directs heat to flask contents while the exterior case remains cool enough to rest on the lab bench
- Heating elements are located close to the cavity surface for maximum heat transfer
- Maximum operating temperature is 482°C (900°F)
- 120V, 50/60Hz
- Mantles are supplied without controls and require external temperature controls to prevent damage to mantle
- (See Catalog No. 339-47206 for controller)
