

## Thermo Scientific Orion 2-Electrode Conductivity Cells

**Description** • 2-Electrode conductivity cells for Thermo Scientific Orion conductivity meter

- The Thermo Scientific Orion 2-electrode conductivity cells are useful for laboratory and field applications

- 2-Electrode conductivity cells 246-10069 and 246-10066 are glass/platinum, have a nominal cell constant of 1.0 cm-1 and are intended for laboratory use; measurement range is 1 µS/cm - 200 mS/cm

- 2-Electrode conductivity cells 246-10075, 246-10072 and 246-25834 are glass/platinum, have a nominal cell constant of 0.1 cm-1 and are intended for laboratory use and ultra pure water; measurement range is 0.1 µS/cm to 100 µS/cm

- 2-Electrode conductivity cells 246-48301, 246-10081 and 246-10078 are epoxy/platinum, have a nominal cell constant of 1.0 cm-1 and are intended for field or laboratory use; measurement range is 1 µS/cm - 20 mS/cm

- 2-Electrode conductivity cells 246-48304 is an epoxy/graphite, has a nominal cell constant of 1.0 cm-1 and is intended for field or laboratory use; measurement range is 10 µS/cm - 200 mS/cm

- 2-Electrode conductivity cells 246-48313 and 246-10198 are steel (V4A), have a nominal cell constant of

- 0.1 cm-1 and are intended for laboratory use and ultra pure water; measurement range is 0.01 µS/cm to 300 µS/cm

- 2-Electrode conductivity cell 246-48322 is glass/platinum, has a nominal cell constant of 10 cm-1 and is intended for high electrolyte concentration solutions; measurement range is 10 µS/cm - 2000 mS/cm
