

California Pacific Labs 4 in. ECO Funnel System, 2.5 gal Rectangular Low Profile Carboy, 63 mm Cap Size

Description • This 4 in. ECO Funnel system includes a 2.5 gal Rectangular Low Profile Carboy

- Our patented ECO Funnel features a latching lid with gasket to keep fumes contained
- A removable large particle filter catches stir bars or other items
- A detachable tube extends into the waste container to prevent chemical evaporation
- The 2.5 Gallon Low Profile HDPE Container is small enough to fit applications where standard carboys are too tall. 9 1/4 in. L x 9 1/4 in. W (without the secondary containment) and less than 11 in. tall when the ECO Funnel is removed

- The ECO Funnel is the ultimate lab safety product for collection of hazardous liquid waste. Its unique, patented design performs two functions, acting as both a sealed waste container and also as a solvent funnel
- The 4 in. ECO Funnel is made of HDPE and has a 450 mL fluid capacity
- This solvent waste funnel is designed with a custom screw cap which secures it to a specified waste container
- It also features a closed-cell HDPE gasket inside the lid and a sturdy positive latch which ensures the lid remains securely closed
- A removable filter is also built into the interior to reduce the loss of stir bars or other large particles in the waste liquid
- The ECO Funnel is a pass-through system, meaning chemicals are not sitting in the funnel for any length of time, so its HDPE construction is compatible with most solvents including those that need to be stored in glass

Benefits of ECO Funnel

- Solves the open waste container problem
- Prevents emissions of 99.9% of volatile waste solvents, acids, and bases in the laboratory
- Maintains an average cost of approximately \$0.07 per day, assuming a four-year product use
- Has a unique, patented design that meets most local, state and federal safety regulations and requirements
-
